

CustusX release notes

v22.04

New features

| Key | Summary | Release Note |
|--------|---|--|
| CX-272 | Improve user and developer documentation | Improved user documentation |
| CX-276 | Make the cxInstaller script use HTTPS URLs | CustusX installer now use HTTPS instead of SSH urls |
| CX-364 | Import of point metrics exported from radiology tools (OSIRIX/Horos) | Import of point metrics exported from radiology tools (OSIRIX/Horos) using MINC/tag file format: https://en.wikibooks.org/wiki/MINC/SoftwareDevelopment/Tag_file_format_reference |
| CX-365 | Add smoothing options in cxContourFilter | Added options to adjust "number of iterations" and "pass band width" in Contour Filter. |
| CX-372 | Use Eigen 3.3.5 | Using Eigen 3.3.5 |
| CX-378 | Support: Connect to PLUS on Windows | Added experimental additions section in installation documentation. Updated documentation for using tracking with Plus Toolkit. |
| CX-391 | Make tool file configuration create OpenIGTLLink tracking config files | Tool configuration GUI can now create OpenIGTLLink tracking config files. |
| CX-402 | Improve NIfTI reader | Improved functionality for reading NIfTI files |
| CX-418 | Reactivate rendering of 3D objects during registration updates | Rendering 3D view during continuous/iterative image-to-image or image-to-patient registration. This enables continuous display of the progress of the registration process. |
| CX-427 | SINTEF organisation address must be updated in CustusX User documentation | SINTEF address updated in documentation to reflect new organisation structure in SINTEF. |
| CX-456 | Allow 2D/3D views to be controlled separately by separate tools | Allow 2D/3D views in different view groups to be controlled by separate tools. |
| CX-459 | Ubuntu 20.04 | CustusX is now tested for Ubuntu 20.04 |
| CX-467 | Handle OpenIGTLLink tracking when ref sensor isn't applied to tool transforms | Added checkbox in tool configuration GUI for applying reference position to all tool position. This is needed for systems that cannot be configured with a reference tool, or don't apply the reference tool transform in advance. |
| CX-471 | Set up Ubuntu 20.04 build machine | CustusX now builds on Ubuntu 20.04, and installer is created |
| CX-480 | Turn off active tool | Allow turning of active tool with tool buttons |
| CX-481 | Add image landmarks by clicking in anyplane | Updated Fast (intraoperative) registration |
| CX-493 | Update tracking menu | Tracking menu updated |

17 issues

Bugfixes

| Key | Summary | Release Note |
|--------|---|-----------------------------------|
| CX-263 | Status bar or widgets jumps up and down | Fixed flickering status bar |
| CX-264 | Fix connection to Cork tracking system | Support for Anser tracking system |

| | | |
|--------|--|---|
| CX-375 | DICOM import z-axis spacing is incorrect | Fixed minor error in DICOM import z-axis spacing. |
| CX-435 | Fix 2D overlay | Added 2D CPU multi volume rendering, and set this as default to make the default installation support more platforms. |
| CX-443 | Not optimal visualisation of US-CT fusion image (BK-5000) | Incoming OpenIGTLink ultrasound images are processed for overlay in 2D: All zeroes inside ultrasound sector are converted to ones to allow Low-Level-Reject setting to be used for filtering out the area outside sector. |
| CX-463 | Not corresponding timetags in image and pos data received over OpenIGTLink | Keep original timestamp synchronization of incoming positions and images received over OpenIGTLink. |
| CX-466 | Depth adjustments on BK scanner gives corrupt US image in CustusX | Fixed probe sector issue with OpenIGTLink |
| CX-485 | All widgets sometimes disappear from a workflow desktop | Auto save of Workflow desktop have been disabled. Now the "Save desktop" button have to be used. This button now also have to be used to save size and position for main application. |

8 issues

Known issues

| Key | Summary | Environment |
|--------|--|-------------|
| CX-500 | Hiding and showing realtime stream in 2D makes GUI widtget loose control | |
| CX-498 | Layout are not saved when changing workflow | |
| CX-497 | Transparent meshes don't show in 2D with CPU rendering | |
| CX-496 | Right click in 2D view don't change view group | |

4 issues

v18.04

New features

| Key | Summary | Release Note |
|--------|--|---|
| CX-114 | Support for OpenIGTLink3 | OpenIGTLink version 3.0 is now used by CustusX. |
| CX-117 | Upgrade to vtk 7 to get OpenGL2 support | CustusX now uses a fork of VTK 7.1.0 |
| CX-143 | Upgrade to Ubuntu 16.04 | Compiles and runs on Ubuntu 16.04 |
| CX-154 | Add overlay support | Multi volume visualization in 2D views works again after updating to VTK 7.1.0 |
| CX-197 | BK scanner support | Initial BK scanner support, using the PLUS framework. |
| CX-208 | Update Eigen to 3.2.10 | Updated Eigen to compile with FAST. However, later versions like e.g. 3.3.3 gives build errors. |
| CX-216 | CustusX should be able to read *.vtpl files and use colors from surface files. | We can now read .vtpl surface files. And in the Mesh Properties there is now a checkbox for using the colors encoded in the surface file. |

| | | |
|--------|--|---|
| CX-218 | Centerline registration | <p>Centerline registration is an image-to-patient registration method to match a centerline extracted from a preoperative image to tracking data from a tool.</p> <p>Intended use: Endoscopy in esophagus (local/updated registration during procedure).</p> <p>Translation along each axis (x,y,z) and rotation around each axis can be turned on/off.</p> <p>Prepare: A centerline can be created from sampled points along a structure in an image (e.g. if automatic segmentation and centerline generation fails).</p> <p>Input: centerline .vtk file + tracking data from endoscope Output: Updated image to patient registration</p> |
| CX-226 | Bronchoscopy image2image registration | Bronchoscopy ImageToImage registration is used to match airway centerlines in two volumes. Intended use: For multimodal image registration in bronchoscopy (CT, PET, MR). E.g. to register a high-resolution CT to a low-resolution CT acquired with PET (PET-CT), to register PET to the high resolution CT. |
| CX-230 | Add a possibility to remove the tool from 2D | Added a right mouse button option to remove the tool and crosshair from the 2D view. |
| CX-238 | Remove TSF and levelset | The Tube segmentation filter and the levelset algorithm has been removed as they are no longer maintained. The Airways segmentation filter is now the filter to use. |
| CX-240 | Correct refresh and behaviour of tool colors | <ul style="list-style-type: none"> - Added refresh of the tool colors from the preferences dialog. - Set opacity as well. - Draw the 2D crosshair below the offset point. - Improved button names and help text. |
| CX-243 | NIfTI reader | NIfTI file import is implemented. |
| CX-247 | Need ImageToImage registration algorithm which uses point metrics as landmarks | Added a button in the landmarks registration widget which lets you import point metrics in the patient as landmarks. |
| CX-262 | Delete all landmarks button | Added a button in the registration widget to delete all landmarks. |
| CX-267 | Make CustusX compile on macOS Sierra | CustusX compiles on macOS 10.12 (Sierra). |
| CX-273 | Upgrade to ITK 4.12.0 | Upgrade ITK from 4.8.2 to 4.12.0 |
| CX-277 | Make system specific build instructions | Build instructions are now made more complete. |
| CX-278 | Make Anglecorrection open source | Anglecorrection plugin is now open source. |
| CX-281 | Make it possible to turn off interpolation in 2D slices | Added checkbox in preferences to switch between nearest and linear interpolation in 2D slices. |
| CX-287 | Move the Virtual Bronchoscopy plugin to CustusX | The Virtual Bronchoscopy plugin is now a part of the open source CustusX repository. |
| CX-300 | Tracking with OpenIGTLink | CustusX can now use tracking over OpenIGTLink. It is also possible to use PLUS for tracking. |
| CX-302 | Support Mac OSX 10.13 High Sierra | CustusX builds and runs on macOS 10.13 (High Sierra). |
| CX-310 | Trouble with Nvidia drivers on Ubuntu 16.04 | Ubuntu 16.04 with NVIDIA needs to use NVIDIA driver version 375.82. |
| CX-312 | Fix Windows linking in example plugin | The code in the example plugin now links correctly. |
| CX-321 | User support plugin issues | Added short plugin troubleshooting section to plugin help page. |
| CX-323 | Improve build instructions | Build instructions at https://www.custusx.org/uploads/developer_doc/nightly/build_instructions.html have been improved. |
| CX-336 | Simple user interface to BK scanner | Initial version of a simple GUI for BK connection with PLUS. Usable, but not completely finished. Not fully synchronized with existing start/stop tracking button. |
| CX-345 | Install video grabber driver on Ubuntu 16.04 | Ephiphan video grabber works with Ubuntu 16.04. |

29 issues

Bugfixes

| Key | Summary | Release Note |
|--------|---|---|
| CX-63 | Layout 3D ACS x1 shows white 3D view | Fixed issue with the 3D view becoming blank (white) for a specific layout on macOS. |
| CX-89 | Installer does not bundle Qt on Ubuntu | Ubuntu installation now bundles Qt and other libraries. |
| CX-135 | Faulty setting of matrix input in manual registration | This fix changes the interpretation of the Image-to-image registration widget input fMM matrix to make CustusX compatible with external registration tools like Siemens Syngo workstation. If more than three landmarks are defined and in state "Active", the total Root Mean Square (RMS) accuracy for those landmarks will be calculated and indicated in GUI. |
| CX-192 | Video grabbing is not working on Mac, update OpenCV | Fixed. However, it has been seen that tracking drivers might need to be reinstalled on Mac after installing grabbing drivers. |
| CX-212 | Navigation inside a surface don't work | Backface and frontface culling is now turned off by default, because of VTK 7 changes. |
| CX-222 | The contour filter crashes when it has no input | Fixed a crash when adjusting the threshold when there was no input volume selected. |
| CX-227 | Segmentation fault in image2image registration | Segmentation fault in CustusX when using manual image2image registration widget. Bug only appeared when there was no registration history. Fixed. |
| CX-228 | Volume Properties: Incorrect rMd display | Fixed display of rMd matrixes in volume and mesh properties info tab. |
| CX-231 | Overlay and or shared context has errors on windows | The use 2D overlay option was not set default to on on Windows. Now it is. |
| CX-232 | Color in 2D views are incorrectly initialised | Issue is only identified on Macs with NVIDIA GeForce GT 750M. This problem is now mentioned in the supported platforms help file. |
| CX-235 | Show tool path don't work | Fixed show tool path after VTK upgrade changing PolyData behaviour. |
| CX-244 | Wrong movement of manual tool when offset is set | Tool offset is no longer added to editable matrix in Tool Properties. Added help text to Tool Properties. |
| CX-245 | The crosshair on the 3D manual tool is wrong with offset | Manual tool crosshair is now drawn in the correct position when offset is used |
| CX-257 | Crash on DICOM import when character "%" is present in DICOM tag 0008.103e "Series Description" | Fixed CustusX crash when importing DICOM series with character "%" in Series Description. |
| CX-288 | Wrong help text on the tool status bar. | The help text on the tools on the status bar when tracking was wrong. Visible tools were labeled as not visible and vice verca. |
| CX-297 | Manual Image2Image registration - Calculation of accuracy in landmarks | Manual Image-to-Image registration - Calculation of accuracy in landmarks also when fewer than three landmarks are defined. |
| CX-301 | Corner metrics text not displayed | When using the Corner metrics setting in the preferences, the corner text would disappear when changing between different layouts. It would also not be displayed at all when autoloading a patient in Windows. This has been fixed. |
| CX-316 | Bronchoscopy image-to-image registration | Fixed bug in Bronchoscopy Image to Image Registration |
| CX-326 | Mac installers of CustusX now only work for macOS High Sierra (10.13) | Mac installers are now compiled for macOS 10.11 (El Capitan) and above |
| CX-338 | Old developer docs present in custusx.org "Developer Documentation" | Removed old documentation files from custusx.org. |
| CX-342 | Crash during cropping and clipping | Fixed bug in VTK 7.1 causing crash when using volume cropper and clipping simultaneously in 2D/3D view. |

21 issues

v16.12

New features

| Key | Summary | Release Note |
|--------|---|---|
| CX-118 | Should be possible to turn on or off custom context menu for views. | Added functionality for turning context menu of views on and off for existing layouts. |
| CX-128 | Integrate metric properties in browser widget | A new Browser widget has been created. It contains a list of objects in the patient and can be used to control camera views and set properties and so on. |
| CX-167 | Implement Accusurf in CustusX | Implement Accusurf in CustusX. Simple version: One target only. 1. Read CT volume (.mhd) and route-to-target centerline (.vtk) 2. Input option: Accusurf thickness (number of voxels) 3. Generate new CT volume (.mhd): Accusurf |
| CX-170 | Allow import of 32 bit PET volumes | Allowed import of 32 bit PET volumes |
| CX-172 | Route-to-Target plugin: Extend route | Current route-to-target (RTT) terminates at the airway centerline position closest to the target. It is necessary to extend the route to the exact target position. The old RTT line should be kept as it is, and another extended line should be created. This line will be used as input to the Accusurf plugin. |
| CX-186 | Create template patient system | Added an option in the menu to create a new patient from an old one. In this way you can have premade template patients. |
| CX-188 | Add texturing to mesh | It is now possible to add a texture to a mesh in a rather primitive way. |
| CX-189 | 2D slice along tool fixed to gravity. | Created a new 2D plane, ToolSide, which is parallel with the tool axis and always oriented with gravity. |
| CX-190 | Create Custom metric | A new Custom metric has been created. This metric improves the possibilities of custom geometric modelling. One can now set an imported mesh or image in a point with a direction. The custom metric has several other features as well. |
| CX-191 | New concept: Operating table | CustusX needed a definition of a Table, oriented relative to the patient. The table orientation can be used to provide navigation relative to the surgeon in combination with camera settings. |

10 issues

Bugfixes

| Key | Summary | Release Note |
|--------|--|---|
| CX-37 | Registration history | Store all registrations, if they are not explicitly marked as temporary. |
| CX-97 | Import image from stream don't work for 3D probe | Fixed an obvious bug where the pointer to the vtkImageData containing the stream was used instead of the DeepCopied object from the original code. |
| CX-115 | Playback don't show any tool movement | Fixed playback issue: only the last installed tracking system were wrapped in playback - now all systems are considered. |
| CX-124 | Filter Tracking positions does not work | Fixed. Filter Tracking positions was not read properly: When changing the value in Properties GUI the filter is enabled. When starting the application with filter ON, nothing happened. Also added more GUI to set cutoff frequency. |
| CX-125 | Tool offset not applied to tool during init | Fixed. The tool offset is a global property. When a tool is initialized, the global value was not applied to the tool. |
| CX-132 | Handle crash in tool calibration | Handled a crash during tool calibration. The calibration matrix could also be corrupted and this has been handled. |
